The Alarming Rise of Medicalisation in India

GS Paper II: Issues related to Health

Context:

India's **health paradox** is evident as **Air India links BMI to job fitness**, even as a surge of **anti-obesity drugs like Semaglutide** signals growing **medicalisation of body weight**, with **root lifestyle causes still overlooked**.

The Obesity Epidemic- A Silent Crisis:

- **The Burden:** Nearly **one-quarter of Indians** are overweight or obese. India now ranks second globally for **childhood obesity**.
- **Metabolic Syndrome:** One in 10 Indian adults lives with **diabetes**, and one in three with **hypertension**.
- **The "Thin-Fat" Phenotype:** South Asians have a unique **genetic predisposition** toward excess visceral fat despite appearing lean, making them susceptible to metabolic diseases at lower BMIs.
- **Socio-Cultural Shift:** Historically, excess weight was seen as a sign of **prosperity**; today, it is a marker of a public health crisis driven by **urban work patterns**, shrinking open spaces, and chronic stress.

Key Concepts & Terms:

- **Medicalisation:** The process by which human conditions and problems come to be defined and treated as **medical conditions**, shifting focus away from **social or environmental** solutions.
- **Ultra-Processed Foods (UPF):** Food items containing high levels of **salt, sugar, and fats**, often with additives and preservatives, designed for long shelf-life and high palatability.
- **Sarcopenia:** The loss of skeletal muscle mass and strength, an unintended but serious consequence of rapid drug-induced weight loss.
- **GLP-1 Pathways:** The biological mechanism targeted by modern anti-obesity drugs to **suppress appetite** and slow gastric emptying.

The Pharmaceutical Response and "Cascading Logic":

- **Market Explosion:** With anti-obesity drugs like **Semaglutide** (Ozempic) going off-patent, dozens of low-cost versions are flooding the Indian market.
- **Surrogate Advertising:** Although prescription drugs cannot be directly advertised, companies use **sophisticated "public awareness" campaigns**, billboards, and influencer endorsements to drive demand.
- **The Sarcopenia Cycle:** Anti-obesity drugs (GLP-1 pathways) are associated with a **25% to 40% loss of muscle mass** (Sarcopenia).
- **The Cascade:** Instead of promoting resistance training, the industry is already developing *new* drugs to treat the **muscle loss** caused by the *first* set of weight-loss drugs. This creates a **self-sustaining cycle** of medication and market dependence.

The Role of the Food Industry- Driving the Disease:

- **Growth of UPFs:** The **ultra-processed food sector** in India grew at **13% annually** between 2011 and 2021.
- **Marketing vs. Regulation:** While pharmaceutical "remedies" are celebrated, policy responses to the drivers of obesity—like **Front-of-Package Labeling (FOPL)**—continue to face significant delays due to industry pushback.
- **The Paradox:** One industry (**UPFs**) promotes consumption patterns that drive disease, while another (**Pharma**) offers remedies for the resulting conditions, creating a highly profitable but **public-health-misaligned** ecosystem.

Challenges and Ethical Concerns:

- **Shrinking Clinical Intervals:** The time between a drug's market entry and its inclusion in **professional medical guidelines** is shrinking, raising questions about the influence of **commercial interests** on clinical practice.

Join Whatsapp

Join Telegram

- **Measurement-Driven Dependence:** Using **BMI** as a strict criterion for employment or pay (as seen in recent aviation policies) can inadvertently drive individuals toward **risky pharmacological solutions** rather than sustainable health.
- **Regulatory Lag:** Government intervention on aggressive surrogate pharmaceutical ads often comes a year too late, after public perception has already been reshaped.

Way Forward:

- **Foundational Interventions:** Re-centering health on **restorative sleep, nourishing diets, physical activity**, and stress management rather than viewing drugs as a substitute.
- **Transparency:** Mandating clearer disclosures of the **long-term risks** (like muscle loss) of newer therapies.
- **Stronger Advocacy:** Reaffirming the **ethical compass** of the medical profession to prioritize long-term **metabolic resilience** over quick weight-loss metrics.
- **Policy Action:** Implementing strict **Front-of-Package warning labels** and regulating the aggressive marketing of **high-fat, salt, and sugar (HFSS)** foods.

Conclusion:

Anti-obesity drugs should be recognized as **adjuncts**, not destinations. India must pause to recalibrate its health narrative before **medicine begins to define health** solely through the lens of market-driven dependence. Durable well-being requires addressing the **systemic drivers** of obesity rather than just medicating its symptoms.

Mains Practice

Q. Discuss the need for mandating cigarette-style health warnings on chips and cold drinks in India. What measures can be adopted to regulate their consumption? (150 Words, 10 Marks)

Food Worth ₹1.55 lakh Crore Wasted Annually

GS Paper II: Issues relating to Poverty and Hunger

Context:

The **UNEP Food Waste Index Report 2024** highlights a painful contradiction: the world wasted **1.05 billion tonnes** of food in 2022, while **783 million people** faced hunger. India ranks **second globally** in food waste, with **78-80 million tonnes** (worth **₹1.55 lakh crore**) lost annually.

The Scale of the Crisis:

- **Global Distribution of Waste:** Households are responsible for **60%** of food waste, followed by food services (**28%**) and retail (**12%**).
- **India's Paradox:** While India's per capita household waste (**55 kg**) is lower than that of the U.S. (**73 kg**), the country ranks **111th out of 125** in the **Global Hunger Index**.
- **Punjab's Challenge:** As a major producer, Punjab faces high spoilage rates. Over **8,200 tonnes** of foodgrains were spoiled in **FCI facilities** in Punjab alone between 2019-2024—the highest in India.
- **Environmental Impact:** Food waste accounts for **8-10% of global greenhouse gas emissions**. If food waste were a country, it would be the **third-largest emitter** after China and the U.S.

Systemic Inefficiencies- Why Food is Lost:

- **Post-Harvest Handling:** Inadequate covered storage, lack of grading, and unscientific packaging lead to massive losses, particularly in fruits and vegetables (around **20% loss** in Punjab).
- **Infrastructure Deficit:** India processes only **8%** of its produce, compared to **65% in the U.S.** and **23% in China**.
- **Storage Policies:** The **Jute Packaging Materials Act** mandates grain storage in porous jute sacks, which are highly susceptible to rodent damage and moisture.
- **Logistics Gaps:** Under-investment in **cold-chain infrastructure** prevents produce from reaching distant markets before spoiling.

Join Telegram

The Ecological and Human Cost:

- **Resource Depletion:** Wasting food is equivalent to wasting the water, land, and fuel used to produce it. For example, producing **1 kg of rice** requires **5,000 litres of water**; throwing it away exacerbates groundwater depletion.
- **Methane Emissions:** Decomposing food in landfills releases **methane**, a greenhouse gas significantly more potent than CO_2.
- **Economic Loss:** The annual waste of **₹1.55 lakh crore** represents a direct loss to the farmer's hard work and the nation's economy.

Challenges to Zero Waste:

- **Inadequate Database:** India lacks a **consolidated national database** to track food waste at the retail, hospitality, and institutional levels.
- **Policy Gaps:** There is currently no national mandate or law to ensure the **redistribution of surplus edible food** to food banks.
- **Consumption Culture:** Urban consumption patterns have "normalized" discarding food as an acceptable cost of abundance.

Way Forward:

- **Build the Cold Chain:** Treat **cold-chain infrastructure** as essential food security infrastructure. A national mission is needed to scale up processing from 8% to global standards.
- **Legislate for Sharing:** Model laws after European nations (like France) to make it **illegal for supermarkets to destroy unsold edible food**, mandating donations to food banks instead.
- **Empower the "First Mile":** Equip **Farmer Producer Organizations (FPOs)** with mechanised drying, **hermetic storage bags**, and mobile cold units. Review the Jute Packaging Materials Act to allow modern storage solutions.
- **Visibility and Rewards:** Introduce **mandatory food waste measurement** and reporting for large businesses (hotels, wedding caterers) to track and reduce waste.
- **Revive the "Anna" Ethic:** Rekindle the cultural philosophy of treating food as sacred (**Anna Brahma**). Schools and civic institutions must promote food respect as a **civic responsibility**.

Conclusion:

Ending food waste is a **humane and ecological necessity**. By integrating food loss into **national climate plans** and reconfiguring supply chain incentives, India can transition from a culture of apathy to one of efficiency, ensuring that the bounty produced by the farmer reaches the plate of the hungry.

Mains Practice

Q. The coexistence of a billion tonnes of food waste and a billion hungry stomachs globally is not an irony, but an indictment of systemic inefficiency. In the context of India's ranking in the Global Hunger Index, critically analyze the causes of food waste and suggest comprehensive measures to build a zero-waste food ecosystem.

Reclaiming Ambedkar Legacy: Relevance in Today's Times

GS Paper I: Modern History

Context:

On **April 14, 2026,** India celebrated the **135th birth anniversary** of **Dr. B.R. Ambedkar.**

- In an era of shifting social and political landscapes, remembering "Babasaheb" is not just a ritual—it is a **necessity**. His legacy provides a toolkit for **Constitutional Morality**, ensuring that justice remains the heartbeat of Indian democracy.

Biographical and Intellectual Foundations:

- **Commemoration:** Born on **April 14**, his death anniversary on **December 6** is observed as **Mahaparinirvan Diwas**.

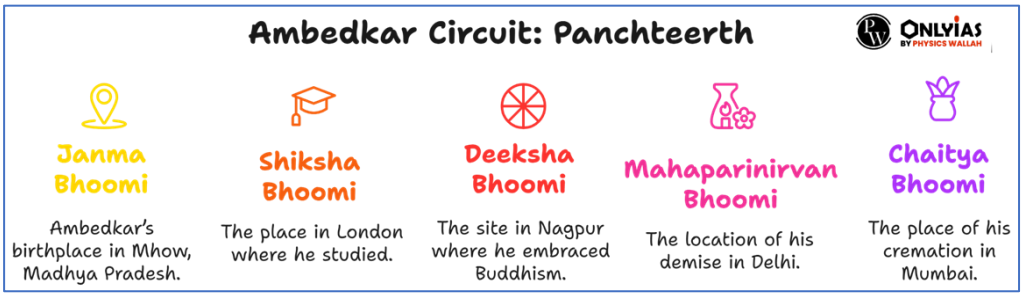
Join Whatsapp

Join Telegram

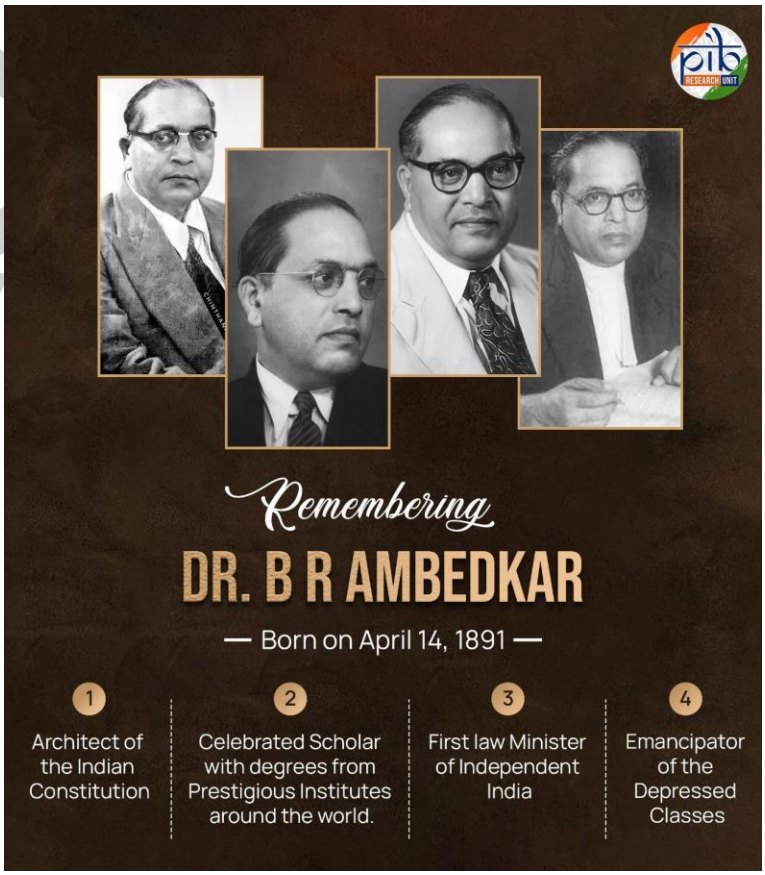
- **Major Literary Works:**
  - **Annihilation of Caste:** A radical critique of the caste system and orthodox religious structures.
  - **Who Were the Shudras?:** A historical and sociological inquiry into the origins of the caste hierarchy.
  - **Waiting for a Visa:** His autobiography detailing lived experiences with untouchability, used as a global pedagogical tool.
- **Media Outreach:** He leveraged journalism to mobilize the "depressed classes" through journals like **Mooknayak (1920)**, **Bahishkrit Bharat (1924)**, **Samta (1928)**, **Janta (1930)**, and **Prabuddha Bharat (1956)**.

Economic Architect & The Reserve Bank of India (RBI):

- **The Problem of the Rupee:** In his seminal work, **The Problem of the Rupee: Its Origin and Its Solution**, Ambedkar provided the conceptual framework for currency stability and exchange rate management.



- **Founding of RBI:** His evidence before the **Hilton Young Commission** (Royal Commission on Indian Currency and Finance) served as the foundational guideline for the recommendation and eventual establishment of the **Reserve Bank of India** in 1935.
- **Agrarian Remedies:** In his 1918 essay, **Small Holdings in India and Their Remedies**, he argued that **Industrialization** was the primary solution to agricultural stress and "surplus labor," a concept central to modern **Food Processing** and rural-urban migration policies.



Infrastructure and Water Policy Development:

- **Viceroy's Executive Council:** As a member (**1942–46**), he was the chief architect of India's **multipurpose water and power policies**.
- **Institutional Building:** He played a pivotal role in establishing:
  - **Central Water Commission (CWC)**
  - **Central Technical Power Board**
- **Integrated Water Management:** He conceptualized **River Valley Projects** modeled on the Tennessee Valley Authority (USA), leading to the **Damodar Valley Project**, and projects on the **Son, Mahanadi (Hirakud), and Kosi** rivers.

Labor Welfare and Gender Equality:

- **Labor Policy:** He transformed India's labor landscape by advocating for:
  - A **48-hour work week** (reduced from 72 hours).
  - **Minimum Wages** and the principle of **Equal Pay for Equal Work**.
  - **Maternity Benefits** for women workers.
- **Mine Reforms:** He successfully campaigned to lift the ban on **women working in underground coal mines**, ensuring their right to employment in all sectors.
- **Hindu Code Bill:** He resigned as India's first Law Minister over the delay in passing this bill, which sought to grant women rights to **inheritance, marriage, and adoption**.

Land Reforms and Social Justice:

- **Abolition of Exploitation:** In 1937, he introduced a bill in the Bombay Assembly to abolish the **Khoti System** (exploitative land tenure) and campaigned against **Sarfdom** (forced labor on ancestral lands).
- **Universal Adult Franchise:** He was a staunch advocate for **Universal Suffrage**, ensuring every citizen, including women and the marginalized, had an equal vote long before many Western democracies.
- **Bahishkrit Hitakarini Sabha:** Founded to promote education and socio-economic upliftment of the outcasts.

State Commemoration- The Pancha Teerth:

To honor his life, the government has developed five key sites as **Pancha Teerth**:

- **Mhow (Madhya Pradesh):** Birthplace (**Janma Bhoomi**).
- **London:** Education at the London School of Economics (**Shiksha Bhoomi**).
- **Delhi:** Residence where he passed away (**Mahaparinirvan Bhoomi**).
- **Nagpur:** Site of his conversion to Buddhism (**Diksha Bhoomi**).
- **Mumbai:** Site of his cremation, Chaitya Bhoomi (**Chaitya Bhoomi**).

Alignment with Modern National Goals:

Modern government initiatives are viewed as a continuation of Ambedkar's vision for **Socio-Economic Empowerment**:

- **Financial Inclusion: Mudra Scheme** and **Stand Up India** (promoting entrepreneurship among SC/ST and women).
- **Social Safety Net: Ayushman Bharat** (Healthcare) and **PM Awas Yojana** (Housing).
- **Digital Literacy:** Ensuring that the "Information Divide" does not become a new "Caste Divide" in the era of **Artificial Intelligence**.

Conclusion:

Dr. Ambedkar was not just a leader of the marginalized but a **Universal Statesman** whose contributions to labor, water, power, and economics form the backbone of the Indian State. His philosophy of **Educate, Agitate, Organize** remains the guiding light for achieving a truly inclusive **Viksit Bharat**.

Mains Practice
Q. Discuss the relevance of Dr. B. R. Ambedkar's vision of social justice in contemporary India. Suggest measures to strengthen it. (250 Words, 15 Marks)
