Lunar Governance Should be Multilateral

GS Paper III: Awareness in the fields of Space

Context:

The **Artemis II mission (2026)**, framed as **"humanity's return to the Moon,"** reflects a **historical–modern paradox**—echoing **Apollo 8 mission's "Earthrise"** during the **Vietnam War**, even as today's celebrations coincide with **Middle East conflicts** and a **weakening rules-based order**.

Erosion of Rules-Based Global Order:

- **Critique of U.S. Hypocrisy:** Promotion of space missions as **"humanity's achievement" vs. alleged violations of human rights** and international law.
  - Actions include deportations without due process, **weakening of global institutions**, and continued military support despite global criticism.
- **Weakening Multilateral Institutions:** Tariffs under **International Emergency Economic Powers Act** violating norms.
  - Paralysis of **dispute resolution in World Trade Organization** due to blocked Appellate Body.
- **Policy of Strategic Self-Interest:** National interest **overriding global commitments**, reducing credibility of leadership.

The Argument for Multilateral Governance:

- **Common Heritage of Mankind:** Similar to the governance of international seas under **UNCLOS** (championed by Arvid Pardo), the lunar surface should be treated as a "global common" and not private property.
- **Reviving International Treaties:** There is a call to return to the principles of the **1967 Outer Space Treaty**, which prohibits national appropriation of space, and to revive the **1979 Moon Agreement** to ensure equitable resource sharing.
- **Empowering the UN:** The source suggests that the **UN Committee on the Peaceful Uses of Outer Space (COPUOS)** should be the central body for governing lunar activities to prevent space from becoming a new geopolitical battlefield.
- **Trust and Transparency:** Multilateralism is preferred over the unilateral control of any nation; for instance, **China is viewed as an unreliable alternative to the US** due to its **lack of transparency in space policy**.

Governance Gaps in the Evolving Space Order:

- **The "Lunar Gold Rush":** Rising global competition for lunar resources (especially water ice at the south pole for fuel and deep-space missions).
- **Issues with Artemis Accords:** "Safety zones" may become de facto exclusion zones.
  - Risk of "first come, first served" control over scarce resources.
  - Imposition of U.S.-centric interpretation of space resource rights.
- **Space as a Geopolitical Battlefield:** Increasing rivalry akin to Cold War dynamics.
  - Concerns over transparency (U.S.) and even lower transparency (China), complicating consensus.
- **Undermining Multilateralism:** Sidestepping the UN Committee on the Peaceful Uses of Outer Space through bilateral agreements.
  - Risk of selective rules becoming global norms without universal agreement.

Way Forward:

- **Promote Multilateral Framework:** Treat space as the **"common heritage of mankind"**, akin to **global commons regimes**, ensuring **collective governance**.

- **Revive Global Treaties:** Re-engage with the **Moon Agreement** to enable **equitable and rules-based governance**.
- **Strengthen UN Role:** Empower the **UN Committee on the Peaceful Uses of Outer Space (UNCOPUOS)** to **effectively regulate space activities**.
- **Ensure Equity & Inclusivity:** Guarantee **equal participation of all nations** and establish **fair benefit-sharing mechanisms**.
- **Prevent Resource Monopolisation:** Avoid the **conversion of lunar resources into private or exclusionary zones**.
- **Avoid Geopolitical Rivalry:** Promote **cooperative frameworks** and prevent **dominance by major powers (e.g., U.S.–China rivalry)**.
- **Align Leadership with Legitimacy:** Ensure **space ambitions align with international law and human rights commitments**.

Conclusion:

Space exploration is now **geopolitics**, with today's **rules shaping humanity's future**. As a **global commons**, space must not become **private property**. A **fair, inclusive, multilateral framework** is the only **just and sustainable path forward**.

Mains Practice

Q. The governance of Outer Space is transitioning from a domain of scientific exploration to a theater of geopolitical rivalry and commercial resource extraction. Evaluate the need for a comprehensive multilateral framework over bilateral accords like the Artemis Accords in this context. (250 Words, 15 Marks)

'Managing General Agents' Can Reshape Insurance Sector

GS Paper III: Indian Economy and Issues related to Planning, Mobilisation of Resources, growth, Development and Employment

Context:

The **Insurance Amendment Bill, 2025 (Sabka Bima, Sabki Raksha Act)** aims to achieve **universal insurance coverage by 2047**, drawing inspiration from **Reserve Bank of India-led banking reforms** to make insurance **accessible, transparent, and community-driven**.

Defining Managing General Agents (MGAs):

A core feature of the Bill is the formal introduction of **Managing General Agents (MGAs)** as a new category of intermediary.

- **The MGA vs. Broker:** Unlike traditional brokers who primarily sell products, **MGAs** act as **Mini-Insurers**. They hold **Delegated Authority** from large insurance companies to perform specialized functions like **Underwriting**, **Risk Assessment**, and **Claim Settlements**.
- **Functional Separation (The Restaurant Analogy):** Think of a large insurer as the **Head Chef** who manages capital, safety standards, and the overall menu (**Strategy/Compliance**). The **MGA** is the **Manager/Waiter** who handles customer interaction, localizes service delivery, and ensures the "food" (**Policy**) reaches the table efficiently.

Key Conceptual Terms:

- **Underwriting:** The process of **evaluating various risk factors** to determine the appropriate premium for a policy.
- **Insurance Density:** A measure of the **average amount of insurance premium paid per person** in a given population.
- **Parametric Insurance:** A model where the payout is tied to a **specific parameter** (like wind speed or earthquake magnitude) rather than the actual loss incurred, accelerating the **Claims Facilitation** process.

Addressing Structural Industry Failures:

The Bill targets several systemic bottlenecks in the current Indian insurance landscape:

- **One-Size-Fits-All Approach:** Traditional models often fail to cater to niche or regional needs.

- **High Distribution Costs:** Urban-centric services make rural expansion prohibitively expensive for large insurers.
- **Trust Deficit:** Slow settlement processes and a lack of local engagement have historically discouraged adoption.
- **The Penetration Gap:** India's **Insurance Penetration** (the ratio of total insurance premiums to the national **Gross Domestic Product**) and **Insurance Density** (the average per capita expenditure on insurance premiums) currently lag behind developed economies.

Key Pillars of the Reform:

- **Technological Integration and Parametric Insurance:** The Act encourages the use of **Artificial Intelligence (AI)** and **Predictive Analytics** to automate repetitive processes.
  - A major shift is the promotion of **Parametric Insurance**, where claims are triggered by a pre-defined specific event (e.g., a natural disaster recorded by a sensor) rather than a lengthy individual loss evaluation.
- This leads to **near-instant payouts** and **builds consumer trust**.
- **Empowering the Regulator (IRDAI):** To ensure the sector stays dynamic, the Bill grants the **Insurance Regulatory and Development Authority of India (IRDAI)** greater **Regulatory Agility**.
  - This allows the **IRDAI** to amend rules based on fast-moving market dynamics without requiring constant parliamentary intervention.
- **Niche Innovation and Sandboxes:** Through **Regulatory Sandboxes**, **MGAs** can trial localized products such as **Crop Insurance** or policies in **Local Languages**.
  - This reduces the "distance" between the provider and rural customers in **Tier 2 and Tier 3 Cities**.

Global Best Practices:

- **United Kingdom and Germany:** Proven success in using **MGA Networks** for specialized risk assessments and entering high-risk markets.
- **China and Singapore:** Enabled specific insurance subsidiaries for **MSMEs (Micro, Small and Medium Enterprises)** and established global tech-driven hubs for innovation.
- **Japan:** Developed **Culturally Aligned Products**, such as specialized pet insurance and elder-care health coverage.

Conclusion:

The **Insurance Amendment Bill, 2025** is a **financial inclusion blueprint**, leveraging **Managing General Agents** to address **last-mile gaps** and bridge the **trust deficit**. It aims to extend insurance to the **most vulnerable**, advancing **inclusive growth** and the vision of **Viksit Bharat** under **Sabka Bima, Sabki Raksha**.

Mains Practice

Q. Despite steady economic growth, insurance penetration in India remains sub-optimal. In this context, analyze how the introduction of Managing General Agents (MGAs) under the Insurance Amendment Bill, 2025 can revolutionize the insurance sector. (250 Words, 15 Marks)
